Note:

- For special applications or high ambient temperature, CSI will use copper blocks.
- For water-cooled type shunts, please call for dimensions.
- Do not use excessive force to install the shunt in multi-blade bus bar connection. Shunts should be installed so that they will not be damaged by terminal expansion forces in the connecting bus bars or by short circuit forces.

It should be recognized that shunts are inherently weaker than their current connections and that special flexibility may be needed.
